I am passionate about building great products that deliver value for customers utilizing my Software Engineering background with over 14 years of experience in various business domains, including banking, payments, insurance and more.

As a Technical Product / Project / Delivery Manager, I possess good analytical, technical and client relationship management skills with the ability to relate to people at multiple levels of business and management.

I have worked on various projects from start-ups to large scale enterprises that required me to work closely with clients and end users.

While leading technical projects, I have guided the back end and front-end sides of high-impact projects and established best practice standards. I have acted as the primary interface between developers and other teams within my organization. This has given me an opportunity to collaborate and work with other disciplines such as marketing, sales, business development and operations to deliver solutions that meet customer needs.
